\*Note: footers added in all pages, not able to capture in some screenshots

2. The features include being able to jump to each page on the screen in the header, being able to type in a date with a date function, and typing in details and locations
3. Minor issues include is uploading pictures in page 4
4. I really enjoyed the creativity of creating these HTML pages. I also enjoyed how I could add my logo and own company, and included the events. Some challenges is the submit button and edit and delete buttons don't have action events yet. I hope to keep working on this page and maybe add a txt file to add, so I can add the event the user enters to be displayed on page 3 (and maybe add a calendar on page 2). I overcame these challenges by using previous knowledge from ITIS 3135.
